

As part of the middle school 1-1 initiative, Pasco School District is making apParent Online available to parents at no cost. apParent Online is a mobile app that allows parents to monitor and manage their child's district issued laptop after school hours.

apParent Online is available for Apple, Android, and Windows mobile devices and allows parents to:

- View screen images of their child's device
- Lock their child's device with a custom message
- Schedule times of non-use for their child's device
- View 24 hours of their child's web browsing history

How Do I Participate?

If your email address is on file, Pasco has already sent you an invitation to participate in apParent. If you did not receive an email invitation, please check your Junk folder. If you are unable to find the email, please email parentsupport@psd1.org for assistance.

In the invite email, click your personalized link at the bottom of the email. This will direct you to the opt-in website. Agree to the terms and conditions and click 'Get Started Now'.

You will receive an email with a username and password and a link to download the app from the Apple, Google, or Windows store. Download the app and use the username and password in the email to login. You should now see your child's district issued device and can monitor it.
